KV-SS1100 May Release Notes

System Version: 1.1.1368

Feature Additions

- **About Screen** – The about screen is located under the Device Settings menu. It shows software copyright information and listing of open source licenses.

Bug fixes

- When certain scanning errors occur, such as paper jam, double feed, or other error, it is now possible to resume / continue scanning, instead of having to start over.
- An issue was fixed where a double feed could cause KV-SS1100 to appear frozen.
- Scanning speed is now slowed down depending on the scanning options to ensure that KV-SS1100 can keep up. Previously, the scanner would scan 10 – 15 pages and then wait for KV-SS1100 to process them. The speed is slowed under the following circumstances:
  - DPI is 400 or higher
  - Auto Rotate is used, *and:*
    - DPI is 200 and using duplex scanning
    - DPI is 300 and using simplex scanning
